

The purpose of this exercise is to see the many possibilities in a drawing using only straight lines.

1. Make a 6" square on a piece of paper in pencil. Lightly draw 1" marks on all of the edges. Connect the dots at the 3" marks to make a square floating in the middle of the square.

2. Draw straight lines (parallel) from the outside edges of the inner square to the edges of the outer square.

3. Fill the center of the square with a pattern of your choosing using only straight lines.

Done! You can color this in, or xerox many copies of the square and make a paper quilt as in the main project.
